

Communicating the Bloom Series

Demonstrating a Statewide Collaboration Tool and Dashboard for HABs in Florida

Join the Indian River Lagoon National Estuary Program (IRLNEP) & StormCenter Communications as we showcase a statewide approach to collaboration and communication related to Harmful Algal Blooms (HABs). Datasets will be pulled from state, federal, & local governments, academia and private stakeholders. Areas to be highlighted include the Indian River Lagoon, Lake Okeechobee, and Tampa Bay. We'll use GeoCollaborate to unify disparate geospatial datasets, create a dashboard and reveal how to drive users to existing portal, hub and website data.
